

Simplify credentialing with a powerful, integrated platform

CAQHSM

Provider Data Collection, PSV and Sanction/Exclusion Monitoring

Provider credentialing is an essential business and compliance function. Shouldn't it be accurate and efficient for everyone involved? Yet, it's often burdensome and costly for both providers and health plans alike. Solutions to automate this workflow have brought new problems: multiple tools that don't integrate, and none address the entire credentialing process. That's why for 25 years CAQH has been bringing the industry together to make the business of healthcare streamlined and efficient.

Today, the nation's providers and health plans trust CAQH to collect and manage provider data, verify primary sources and monitor for sanctions and exclusions. The result delivers streamlined administration, greater regulatory compliance and improved network management.

Better Data Helps You Credential Providers Faster

The CAQH Credentialing Suite is a data management platform driven by a powerful workflow that automates the credentialing process. Today, more than 4.8 million

practitioners rely on CAQH to manage and exchange their data more efficiently. Providers and group administrators enter their information once and share it with all plans they designate. This approach improves data accuracy and lowers administrative burden to credential your provider network faster.

Simplify Credentialing with a Powerful Workflow

A shorter, more cost-effective credentialing cycle empowers your organization to build and maintain a high-quality network, giving your members access to the best possible care.

- **Lower** costs by automating manual and time-consuming processes.
- **Reduce** time from initial credentialing to provider network participation.
- **Improve** productivity through automation, including provider outreach.
- **Scale** with network growth and keep up with increased credentialing volume.

Credentialing as easy as 1-2-3

1. Provider Data Portal

The nation's providers rely on CAQH to enter, update and validate their professional information

Getting the right data from the start has proven to be one of the biggest challenges in the credentialing cycle. Engaging with providers is essential to collecting accurate and up-to-date provider information. This, combined with a robust approach to validating and enriching the data, has enabled CAQH to provide the industry with an essential source of truth.

The **CAQH Provider Data Portal** eliminates redundant processes and streamlines network management for health plans. Once providers complete the credentialing application they can share it with all participating plans at the same time, eliminating redundant requests. The combination of provider engagement and advanced analytics results in less provider abrasion, improved data accuracy and more efficient business processes for plans.

- **All 50 states** accept or support the CAQH credentialing application forms
- **1.8M providers** have attested within the last four months
- **80% of U.S. physicians** have a complete CAQH profile

"The data quality is very good, the processes are automated, and we've been able to reduce staff time.

We now depend on CAQH solutions to help our plan bring efficiencies to the provider credential and re-credential processes."

Blue Cross and Blue Shield of Alabama

2. Primary Source Verification

Faster primary source verification starts with better quality data

A thorough verification process is critical for building a safe, high-quality healthcare network. Because of the complexity of managing PSV, many organizations turn to CVOs. However, this extra step in the process often becomes disruptive for both providers and health plans.

CAQH embeds **Primary Source Verification** directly into the credentialing process, continuously checking using 500+ trusted sources, including state licensing boards and federal registries, to validate provider credentialing data with 98% accuracy. This real-time data verification results in complete, high-quality files, reduces provider onboarding delays, and ensures the safety of health plan networks.

- **95%** of initial provider files returned within 8-14 days
- **1.5M** primary source verifications completed to date

3. Sanctions Monitoring

An added layer of protection for your members

While primary source verification is a snapshot in time, continuous sanctions and exclusions monitoring identifies issues as soon as they are reported. The CAQH Sanctions Monitoring solution is another way health plans can feel confident providers in their network are providing safe, high-quality care to members.

CAQH continuously monitors state licensing boards and other federal sources for sanctions, exclusions and disciplinary actions. The solution identifies exclusions from Medicare and Medicaid, and flags all sanctioned providers on health plan rosters.

A screen capture of the sanction is included in the alert along with additional details a plan may need.

- **90%** accuracy in sanctions detection
- **700+** sources checked nationwide for various practitioner types
- **700K+** sanctions and exclusions records delivered to the Provider Data Portal

CAQH Credentialing Suite

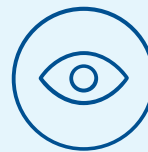

Provider Data Portal

Ease provider burden with one streamlined workflow and improve network management for health plans.

Primary Source Verification

Scale services to accommodate your needs and reduce provider onboarding delays.

Sanctions Monitoring

Maintain consistent sanctions oversight and a high-quality provider network.

NCQA-Certified CVO

CAQH provides credentials verification and monitoring services, delivered with consistently exceptional quality and accuracy.

Driving change with technology

CAQH solutions automate workflows, deliver a wealth of accurate and actionable data, and create a better experience for both providers and health plans.
