

The Trusted Data Connector at the Core of Healthcare

For 25 years, clinicians have maintained their information through our front door. **Our universal provider record** makes it better: a single, attested, primary-source-verified record that integrates provider-supplied data with continuous feeds from authoritative sources, continuously validated **with AI, and unified at the source**. Less burden for providers. Clean, trustworthy data for payers.

One trusted record. Multiple views.
Value across the provider data workflow.

Ongoing Monitoring

The largest provider front door. Built for scale.

Pre-fills each record from authoritative sources and validates it in real time as the provider enters it, correct at the point of entry, not cleaned up downstream.

4.8M

provider records for credentialing, directory management, and more

2.5M

confirmed their data within the last 120 days

6.4M

provider practice locations verified every 90 days for NSA compliance

of duplicates

Industry directory accuracy averages just **48-55%** (CMS study).

One Record. Real Impact.

Better data quality

Cleaner, more complete, and more current
provider data built upstream.

Lower cost

Reduced reliance on downstream manual cleanup,
reconciliation, and point-solution workarounds.

Greater integration

One provider record that can support multiple use cases across
credentialing, contracting, directory, analytics, and monitoring.

Accelerated Workflows

Validated data available early, helping teams
move faster with greater confidence.

Improved Provider Experience

Providers can confirm and update information through one
trusted record, reducing repetitive data entry while improving
the quality and timeliness of the data health plans rely on.
