

Fact Sheet

Achieve 98% accuracy for primary source verification

Accelerate the credentialing cycle with real-time data validation

Because of the complexity of managing primary source verification, many organizations turn to external vendors. However, without a direct connection to provider data, the process often becomes disruptive for both providers and health plans. That’s why DataSpring collaborated with health plans and providers to develop a PSV solution as part of the Credentialing Suite that delivers greater accuracy, speed, and control to credentialing teams.

Faster primary source verification starts with automation

Once there is an active application, the provider data is retrieved for verification anytime a provider updates their credentialing information, without the need for further intervention. The DataSpring solution uses 500+ sources to check the data, including medical schools, licensing boards, government registries, and more. A specially trained team then validates files to ensure plans have complete and accurate information for credentialing and network decisions.

NCQA-certified performance

DataSpring is a NCQA-certified CVO providing credentials verification and monitoring services, delivered with consistently exceptional quality and accuracy.

The Strength of Our Data

98.5%
accuracy and completeness of returned files

95%
of initial provider files returned within 8-14 days

1.5M
primary source verifications completed

Build a better network

DataSpring combines highly trained staff and technology resources to help organizations scale for growth and keep up with increased credentialing volume.

- **Data:** Flows from the provider data portal to PSV, reducing manual entry and risk of errors.
- **Accuracy:** Provider information is verified with primary sources and validated using advanced data science.
- **Control:** Dashboard reports for each provider file track progress in real time.
- **Outreach:** Coordinated outreach reduces duplicate requests from multiple plans.
- **Medicaid Plans:** DataSpring checks the Death Master File and NPPES as an added layer of protection.
- **Cost Savings:** Eliminate provider fees and pass through costs with automation and a direct connection to the DataSpring credentialing solution.

time savings per
provider file

CAQH has made it so easy to complete primary source verification. The accuracy of the files gives us more confidence in the results and our overall credentialing process. Extremely helpful.”

– Largest Medicaid MCO in the U.S.

Driving change with technology

DataSpring solutions automate workflows, deliver a wealth of accurate and actionable data, and create a better experience for both providers and health plans.
